PROFILE

AI and software developer. I build full-stack applications, APIs and LLM-based systems, especially in the areas of RAG, chatbots and AI agents. I am actively deepening my knowledge of AI.

EXPERIENCE

Software Developer | Eszterházy Károly Catholic University, IT Development Department 2025 – present

- Design, development and integration of Python-based AI systems, model training and optimization.
- LLM solutions: RAG and embeddings, prompt engineering, fine-tuning; experiments with agent frameworks.
- Document processing and OCR (Tesseract, AI vision), AI-based text processing and content extraction.
- Constraint-based optimization with SAT solving, linear and logical constraints.

Web Developer and Maintainer | Kepes György College for Advanced Studies; individual client (2022 – 2024) 2022 – 2025

- Website development, maintenance and design, content updates and technical operation.
- At the College also: head of the external communication working group, financial officer and secretary.

Teaching Assistant (Demonstrator) | Eszterházy Károly Catholic University 2023 – 2024

- Supported three practical courses, High-Level Programming Languages I-II (procedural and object-oriented C#) and Application Development and Project Lab I.
- Helped students with Git, Scrum and Kanban, specifications, UML, testing and their term projects.

Salesperson to Store Manager (summer jobs) | MOBIL CENTRUM TEAM Kft. 2022 – 2024

PROJECTS

BSc thesis: Artificial Intelligence in Web Applications | GitHub | Docker Hub 2025

- Django web application with role-based access that supports project administration by generating documentation and specifications with small, free language models on minimal hardware.
- Tested prompting techniques and parameters alone and combined; there is no universal setup, but one shared configuration performed adequately on all five models.
- Targeted prompting gave a significant quality improvement; output exported as GitHub-compatible Markdown.

Technologies: Python, Django, Hugging Face Transformers, SQLite, Bootstrap, Docker, Cypress

SKILLS

AI and ML: LLMs and GenAI, RAG, embeddings, prompt engineering, fine-tuning, AI agents, NLP, deep learning, computer vision, OCR, document processing

AI tools: Hugging Face Transformers, PyTorch, LangGraph, Ollama, OpenAI API, Anthropic API, pgvector, Tesseract

Languages: Python, Java, C#, TypeScript, JavaScript, SQL, PHP

Frameworks and web: Django, Spring Boot, .NET, Laravel, React, Astro, Tailwind CSS, Bootstrap, HTML5, CSS3

Data and DevOps: PostgreSQL, MySQL, SQLite, MongoDB, Docker, GitHub Actions, Git, GitHub, Linux, Bash

Methods and tools: REST APIs, system design, constraint solving (SAT), Cypress, UML (PlantUML), Scrum, Kanban, Jupyter, Trello, LaTeX, Markdown

EDUCATION

Software Developer BSc | Eszterházy Károly Catholic University, Eger 2022 – 2025

Computer System Maintenance Technician | Váci SZC Petőfi Sándor Technical School 2018 – 2022

CERTIFICATES

AWS: Fundamentals of Generative AI; Fundamentals of Machine Learning and Artificial Intelligence; AWS Foundations: Machine Learning Basics (2026)

LANGUAGES AND OTHER

Languages: Hungarian (native), English (B2), German (basic) | **Work:** remote, hybrid or on-site; willing to relocate |

Driving licence: category B
