ABOUT ME

Since childhood, I have been fascinated by the world of IT and software development, which is why I directed my studies in this field. After completing my secondary technical school years, I earned a BSc degree in Computer Science and have been continuously enhancing my professional knowledge ever since. Continuous development, as well as sharing and utilizing the knowledge I have acquired, are of utmost importance to me. My areas of interest include artificial intelligence and machine learning, system design, as well as backend development and website creation.

I am actively working on artificial intelligence-based solutions, API-driven systems, and the development of Retrieval-Augmented Generation (RAG) solutions.

Primarily, I am seeking a position in backend development or in IT-related economic, administrative, or operational fields. I am open to remote or hybrid work, and I am also willing to relocate.

SKILLS

</> Languages:

Python, C#, Java, JavaScript, SQL, PHP, LaTeX.

📁 Technologies:

HTML5, CSS3, JavaScript, Bootstrap, Django (Python), .NET (C#), Spring Boot (Java), Laravel (PHP), PostgreSQL, MySQL, SQLite, Docker, GitHub Actions, Bash, PlantUML, VBA, Jupyter Notebook, Trello, Markdown.

🧑 Soft Skills:

Problem-solving, analytical thinking, teamwork, collaboration, communication, presentation, independence, responsibility, quick learning, adaptability.

PROJECTS

Django
Python
SQLite

Thesis: Artificial Intelligence in Web Applications

🔗 github.com/Drntth/thesis-langmodels-project-management

In my thesis, titled "Artificial Intelligence in Web Applications", I present the development of a web application that leverages artificial intelligence to support project administration, with a particular focus on creating documentation and specifications. My goal was to generate high-quality text using freely available, smaller parameter language models with minimal hardware requirements, employing various prompting techniques and programming tools. During the research, I explored how to work effectively with these models while ensuring that the generated content meets user expectations and supports workflows. The system provides an intuitive interface and downloads the generated documents in Markdown format, making them compatible with the GitHub platform. The greatest challenge was ensuring that the texts were meaningful and usable from a human perspective, which required unique configuration and testing of the models.

EDUCATION AND TRAINING

2022–2025

Eszterházy Károly Catholic University

Higher Education

Software Engineering BSc

Learned technologies:

C# / .NET / Python / Java / HTML / CSS / JavaScript / PHP / Django / Laravel / Spring Boot / SQL / PL/SQL / SQLite / Docker / Bash

Key Areas:

- **Backend and Web Development:** MVC architecture, server-side programming, responsive web design, database integration, authentication and authorization systems
- **Artificial Intelligence:** Python, development and integration of machine learning models
- **Database Management:** data modeling, transaction management, triggers, views, stored procedures, index optimization, database normalization
- **Project Management:** agile methodologies (e.g., SCRUM), version control (Git, GitHub), task tracking (Trello, GitHub Projects)
- **Network Programming:** IP addressing, DHCP, NAT, OSPF, Telnet, WPA2 configuration, Linux-based network building and configuration, firewall setup, network scripting in Bash.
- **Software Design and Testing:** UML diagrams, system design, software quality assurance, documentation creation.

2018–2022

Váci SZC Petőfi Sándor Technical School, High School, and Dormitory

Vocational High School

Computer System Maintenance Technician

Learned technologies:

C# / HTML / CSS / JavaScript / MySQL / SQL

Key Areas:

- **Desktop Application Development (C#):** console and graphical applications, classes, file handling, data structures, error handling
- **Web Development:** HTML, CSS, JavaScript, DOM manipulation, stylesheets, event handling
- **Database Management:** MySQL, SQL, data modeling, queries, relational databases, transaction management
- **Network:** IP addressing, DHCP, NAT, OSPF, Telnet, WPA2 configuration

PROFESSIONAL WORK EXPERIENCE

2025–Present

Software Developer

Eszterházy Károly Catholic University IT Development Department

- Development and integration of systems utilizing artificial intelligence
- Training and optimization of models

 **Technologies:** Python / PostgreSQL / Django

2022–2025

Web Developer and Maintainer

Kepes György College for Advanced Studies

- Development and maintenance of the website
- Content updates, ensuring design and technical functionality

 **Technologies:** HTML / CSS / Javascript

 **Webpage:** szakkoli.uni-eszterhazy.hu

2023–2024

Teaching Assistant Demonstrator

Eszterházy Károly Catholic University

- **High-Level Programming Languages I Practice:** During my tasks, I supported the teaching of the basics of the procedural programming paradigm in C#. With the students, we practiced handling types, variables, operators, selection and iteration control structures, as well as arrays and data structures (list, dictionary, record). I assisted in solving tasks related to handling text files, generating pseudorandom numbers, and implementing methods. The practices focused on developing the students' independent programming skills and preparing them for their term projects.
- **High-Level Programming Languages II Practice:** During my tasks, I supported the teaching of the basics of object-oriented programming in C#. With the students, we practiced creating classes, constructors, inheritance, abstract classes, and interfaces, as well as using LINQ, delegates, and lambda expressions. I assisted in mastering exception handling, generic programming, and graphical interface programming, and further supported the students in planning and implementing independent projects. The practices focused on preparing the students and ensuring the successful completion of their term projects.
- **Application Development and Project Lab I Practice:** During my tasks, I supported students in applying agile and classical project management methods, such as SCRUM and Kanban, as well as using Git-based version control and task tracking systems. I assisted in creating requirement and functional specifications, system designs, and UML diagrams, as well as developing, testing, and delivering both small and larger projects. During the practices, students learned prototyping, the use of rapid development tools, testing and documentation processes, as well as the principles of teamwork and software quality assurance. The course emphasized developing students' independent problem-solving abilities and practical skills.

📁 **Technologies:** .NET / C# / Git / GitHub / UML / Trello / Markdown

2022–2024

Web Developer and Maintainer

Csath Veronika – professional support specialist

- Website development, maintenance, and design creation
- Content updates and ensuring technical functionality

📁 **Technologies:** HTML / CSS / Javascript

🌐 **Webpage:** csathveronika.hu

📁 OTHER WORK EXPERIENCE

2024 summer

Store Manager

MOBIL CENTRUM TEAM Kft.

2023 summer

Assistant Store Manager

MOBIL CENTRUM TEAM Kft.

2022 summer

Salesperson

MOBIL CENTRUM TEAM Kft.

LANGUAGES

Hungarian – native, **English** – intermediate, **German** – basic

DRIVING LICENSE

Category B driver's license

MEMBERSHIPS

2022–2025

Kepes György College for Advanced Studies

Eszterházy Károly Catholic University

The Kepes György College for Advanced Studies was founded in 1991 with the aim of bringing together students who are actively involved in public life and have a scientific interest. The members of the college conduct research in various fields, write TDK (Scientific Student Conference) papers, and participate in lectures and conferences.

📍 **Cím:** Hungary, 3300 Eger, Leányka street 2.

🌐 **Weboldal:** szakkoli.uni-eszterhazy.hu

Held Positions:

- External Communications Team Leader
- Financial Officer and Secretary
- Website Administrator
